Lighting of roads and public amenity areas Replaces BS 5489-1:2003+A2:2008

A list of British Standards relating to the Lighting ...

A low kelvin value produces a warm yellow light, while a higher value produces a cool blue light; Less than 3000k produces warm light (2700-3000k is the standard range for indoor lighting), 3000-4500k a neutral white light good for work and offices, and more than 4500k produces a cool white light or daylight effect, good for reading

How to choose lighting for your home - John Lewis & Partners Consider the amount and type of light that will emitted from each fitting. Bigger rooms obviously need more light than tiny ones, but to easily calculate the amount of light needed for a particular room, work out the size of the space in square metres. Allow roughly 25 watts per meter (250 lumens).

Street Lighting. Street lighting should be designed to achieve sufficient illumination to enable safe movement by pedestrians and cyclists, reducing opportunities for crime and enabling drivers to see hazards on the street. Designers should also aim to illuminate the built environment in an attractive way, and to select and position lighting columns so that they enhance rather than detract from the daytime scene.
