A machine for generating mechanical power in rotary motion from the energy of steam at temperature and pressure above that of an available sink. By far the most widely used and most powerful turbines are those driven by steam. In the United States well over 85% of the electrical energy consumed is produced

Pearl Street Station was the first commercial central power plant in the United States. It was located at 255-257 Pearl Street in the Financial District of Manhattan, New York City, just south of Fulton Street on a site measuring 50 by 100 feet (15 by 30 m). The station was built by the Edison Illuminating Company,

Access Free Steam Turbines

under the direction of Francis Upton, hired by Thomas Edison.

Pearl Street Station - Wikipedia

In turbomachinery, Degree of reaction or reaction ratio (R) is defined as the ratio of the static pressure drop in the rotor to the static pressure drop in the stage or as the ratio of

Access Free Steam Turbines

static enthalpy drop in the rotor to the static enthalpy drop in the stage.. Degree of reaction (R) is an important factor in designing the blades of a turbine, compressors, pumps and other turbomachinery.

Degree of reaction - Wikipedia

As these are capable of

Access Free Steam Turbines

working at overload up to 11,000 or 12,000 horse-power, the total horse-power of the plant for traction purposes alone will aggregate say 121,000 horse-power. To this must be added four steam turbines used for electric lighting and two exciter engines, which would bring up the total horsepower for this station to a ...
