Following Conversations on Religion (Continuum 2008), here is a fascinating line up of original interviews tackling one of today's most vexing issues - that of truth. These discussions explore the question of what truth is, and what role it has in private, public, political and scientific discourses. Some thinkers, see truth as something concrete and immutable, others believe that it is an essentially meaningless concept. And for many contributors it is the practical application of truth which engages them. Each fascinating chapter explores the subject from a new angle, including Nick Davies and Peter Wilby's view on truth in the media, Prof. Martin Kusch's reflections in relation to science and Mary Warnock's consideration of truth in the context of ethics and art. Other contributors include Mary Midgely, Noam Chomsky and A. C. Grayling. This is a book of quite exceptional interest and importance.

Jessie, thinks he is the only shifter alive. Until he meets Kit, the female he's been dreaming of for years. Kit is one tough female. She's had a hard life and deep inside she craves her mate. After they finally meet, it takes some effort for them to see eye to eye but when Kit's dark secret is revealed, the whole leap is put the test.

A book written for those who really practice process management! This book was born of an internal corporate training, in which I presented the designed infographic that illustrates the cover page...repeatedly through several years.Participating in other trainings, audits and events, I came to consider that some of my peculiar approaches could always be seen as great nonsense or as a solid experience and its many scars...always being to the taste or criticism of the public.I was careful to name each chapter as a question that someone has already asked me or that I believe I might be asked, and, then, I hope I have been able to put myself in the seated place of the audience rather than on the lightened stage.

The Intergovernmental Panel on Climate Change (IPCC) has recently summarized the state of the art in research on climate change (Climate Change 1995). The most up to date research findings have been divided into three volumes: • the Science of Climate Change (working group I), • the Impacts, Adaption and Mitigation of Climate Change (working group II), and • the Economic and Social Dimensions of Climate Change (working group III) There is a general consensus that a serious change in climate can only be avoided if the future emissions of greenhouse gases are reduced considerably from the business as usual projection and if at the same time the natural sinks for greenhouse gases, in particular that of CO₂, are maintained at the present level or 2 preferably increased. Forests, forestry and forestry industry are important parts of the global carbon cycle and therefore they are also part of the mitigation potentials in at least a threefold way: 1. During the time period between 1980 and 1989 there was a net emission of CO₂ from changes in tropical land use (mostly tropical deforestation) of 2 1. 6 +/- 1 GtC/a, but at the same time it was estimated that the forests in the northern hemisphere have taken up 0. 5 +/- 0. 5 GtC/a and additionally other terrestrial sinks (including tropical forests where no clearing took place) have been a carbon sink of the order of 1. 3 +/- 1.

This open access book focuses on Switzerland-based medium-sized companies with a longstanding export tradition and a proven dominance in global niche markets. Based upon in-depth documentation and analysis of 36 Swiss companies over their entire history, an expert team of authors presents several parallels in the pathways and success factors which allowed these firms to become dominant and operate from a high-cost location such as Switzerland. The book enhances these insights by providing detailed company profiles documenting the company history, development, and how their relevant global niche positions were reached. Readers will benefit from these profiles as they compile a diverse selection of industries, mainly active within the B2B sector, with mostly mature companies (60 years to older than 100 years since founding) and different types of ownership structures including family firms. "Masterpieces of Swiss Entrepreneurship" brings unique learning opportunities to owners and leaders of SMEs in Switzerland and elsewhere. Findings are based on detailed bottom-up research of 36 companies -- without any preconceived notions. The book is both conceptual and practical. It fosters understanding for different choices in development pathways and management practices. Matti Alahuhta, Chairman DevCo Partners, ex-CEO Kone, Board member of several global listed companies, Helsinki, Finland Start-up entrepreneurs need proven models from industry which demonstrate the various paths to success. "Masterpieces of Swiss Entrepreneurship" provides deep insights highlighting these models and the important trade-offs entrepreneurial teams must consider when choosing the path of high growth or of maximum control, as they are often mutually exclusive. Gina Domanig, Managing Partner, Emerald Technology Ventures, Zurich

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardise up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. BlackwellAssistant Secretary for Maritime Affairs
