The Sumerians called themselves “ the black headed people ” and their land, in cuneiform script, was simply “ the land ” or “ the land of the black headed people ” and, in the biblical Book of Genesis, Sumer is known as Shinar.

This broad treatment will also make the volume of interest to students looking for comparative data in allied subjects such as ancient literature and early religions. Providing an authoritative, comprehensive and up to date overview of the Sumerian period written by some of the best qualified scholars in the field, The Sumerian World will satisfy students, researchers, academics, and the knowledgeable layperson wishing to understand the world of southern Mesopotamia in the third millennium.

These people, the Sumerians, influenced not only all the other civilizations which arose in Mesopotamia but virtually every other human society which followed. Without the Sumerians, the world today would be a very different place. However, although we know a great deal about these people, there are fundamental mysteries about the Sumerians which have still not been solved by historians or archaeologists. For example, the Sumerians seemed to appear in Mesopotamia with a complex and developed society and skills and technologies which no other culture possessed, yet there is no agreement where they came from. They created a complex language, but no-one knows what it sounded like. There are striking examples of similarities between the art of the civilization of Sumer and the art of other ancient civilizations, yet we know that these cultures had no contact with each other. The Sumerians were able to observe and record astronomical and celestial phenomena in very advanced ways which are still not understood. In this book you will about: \* Sumerian Culture \* Sumerian Inventions \* How long were they around \* What they looked like \* Fascinating insight into their everyday life

The Sumerians are widely believed to have created the world 's earliest civilization on the fertile floodplains of southern Iraq from about 3500 to 2000 BCE. They have been credited with the invention of nothing less than cities, writing, and the wheel, and therefore hold an ancient mirror to our own urban, literate world. But is this picture correct? Paul Collins reveals how the idea of a Sumerian people was assembled from the archaeological and textual evidence uncovered in Iraq and Syria over the last one hundred fifty years. Reconstructed through the biases of those who unearthed them, the Sumerians were never simply lost and found, but reinvented a number of times, both in antiquity and in the more recent past.

In this book Professor Woolley, one of the world's foremost archaeologists, shows quite clearly that when Egyptian civilization began the civilization of the Sumerians had already flourished for at least 2,000 years. The idea that Egypt was the earliest civilization has been entirely exploded. The Sumerians had reached a very high level of culture by 3500 B.C.E., and may be said with some justice to be the forerunners of all the Old World civilizations of Egypt, Assyria, Asia Minor, Crete, and Greece. This book will appeal to everyone interested in the early history of humankind.

This civilization is single-handedly responsible for some of the most major innovations in nearly every field relevant to maintaining a civilized society - this includes religion, lawmaking, architecture, schooling, art, literature, and even entertainment.
