A new theory of balanced leadership in projects Leadership is not static. Instead, authority in projects shifts dynamically between project managers, individual team members, and sub-teams, depending on the situation. Leadership may be exercised through a vertical, horizontal, shared, or distributed leadership approach. However, balanced leadership ensures the best suitable approach is used in any given situation. Based on an award-winning global program of research studies, Balanced Leadership is a thorough investigation of balanced leadership in projects. Ralf Müller, Nathalie Drouin, and Shankar Sankaran present a project-specific leadership approach as well as a theory of balanced leadership, and the situations in which different strategies are required. They also outline the five building blocks that enable balanced leadership: nomination of team members, identification of potential leaders, selection and empowerment of leaders, empowered leadership and its governance, and leadership transition. The book explains the coordination of these building blocks through the socio-cognitive space shared by project manager and team. Using real-life case studies and clear examples, this book offers a new way of considering and utilizing dynamic leadership in project settings.

Meredith Belbin's work on teams has become part of everyday language in organizations all over the world. All kinds of teams and team behaviours are covered. At the end of the book is a self-perception inventory so that readers can match their own personalities to particular team roles. Management Teams is required reading for managers concerned with achieving results by getting the best from their key personnel.

These proceedings contain the papers of IFIP/SEC 2010. It was a special honour and privilege to chair the Program Committee and prepare the proceedings for this conference, which is the 25th in a series of well-established international conferences on security and privacy organized annually by Technical Committee 11 (TC-11) of IFIP. Moreover, in 2010 it is part of the IFIP World Computer Congress 2010 celebrating both the Golden Jubilee of IFIP (founded in 1960) and the Silver Jubilee of the SEC conference in the exciting city of Brisbane, Australia, during September 20-23. The call for papers went out with the challenging motto of "Security & Privacy Silver Linings in the Cloud" building a bridge between the long standing issues of security and privacy and the most recent developments in information and communication technology. It attracted 102 submissions. All of them were evaluated on the basis of their significance, novelty, and technical quality by at least five member of the Program Committee. The Program Committee meeting was held electronically over a period of a week. Of the papers submitted, 25 were selected for presentation at the conference; the acceptance rate was therefore as low as 24.5% making SEC 2010 a highly competitive forum. One of those 25 submissions could unfortunately not be included in the proceedings, as none of its authors registered in time to present the paper at the conference.

One of the greatest challenges in assessing student learning in general education programs is addressing the tension between selecting easy-to-measure learning outcomes that have little value or bearing on our institutions' goals and selecting meaningful and substantial learning outcomes that are complex and difficult to assess. Many institutions that have recently replaced their cafeteria-style general education programs with general education programs that focus on complex student learning outcomes find themselves at a loss in attempting to gather evidence on student achievement of these outcomes for internal improvement and external accountability purposes. This volume of New Directions for Institutional Research makes a compelling case that institutions can and should be assessing

consequential, complex general education student learning outcomes. It also gives faculty members and assessment leaders the tools and resources to take ownership of this important work. Part One of this volume provides an argument for why we should be assessing general education and describes a framework, based on a rigorous psychological research approach, for engaging in assessment. The six chapters in Part Two show how this work can be (and is being) done for six important learning outcomes: critical thinking, quantitative reasoning, teamwork, intercultural competence, civic knowledge and engagement, and integrative learning. The volume closes with recommendations on needed innovations in general education assessment and presents a research agenda for future work. Book jacket.

This is the twenty-seventh in the most prestigious series of annual volumes in the field of industrial and organizational psychology. The series provides authoritative and integrative reviews of the key literature of industrial psychology and organizational behavior. The chapters are written by established experts and topics are carefully chosen to reflect the major concerns in both the research literature and in current practice. Continuing the series' tradition of providing scholarly, up to the minute reviews and updates of theory and research this twenty-seventh volume surveys developments pertaining to the self-concept in organizational psychology, the effects of subconscious goals on organizational behavior, combating stress in organizations, e-learning at work, the human dynamics and enablers of effective lean team cultures and climates, personnel selection and the competitive advantage of firms, the processes of team staffing, and strategic human resource management. Each chapter offers a comprehensive and critical survey of the chosen topic, and each is supported by a valuable bibliography. For advanced students, academics and researchers, as well as professional psychologists and managers, this series remains the most authoritative and current guide to new developments and established knowledge in the field of industrial and organizational psychology/organizational behavior.

Project Management introduces students in a unique and accessible way to projectbased working as a means to tackle projects successfully. Not only in business circles, but also in the field of education, increasingly more activities are performed using a projectbased approach. Consider for example comprehensive study assignments, internal projects and projects during work placement and the final stages of a degree. The line of approach of this book is practiceoriented. Based on assignments, groups of two to three students work on a project plan and an executive summary. Students can also opt for a 'real' assignment for a company or for one of the cases of the accompanying website. Added to this fifth edition are examples and illustrations, new sections about various subjects and a chapter about the flexible project approach Scrum.
