Hot Air Rises and Heat Sinks: Everything You Know About Cooling Electronics Is Wrong is a collection of myths, mistakes, and "lessons learned" from practicing engineers involved in the field of electronic equipment cooling. Through anecdotes and stories based on his experiences at Tellabs Operations, Inc. Tony Korodyban covers basic dimensions of heat transfer concepts-mostly from real problems which were incorrectly solved at least once before a correct technique was applied. The book's 31 chapters, each on an important and relevant topic, contain simple line drawings to help illustrate the basic concepts, while the text provides accurate and complete technical explanations. The book's case study approach makes it an extremely useful and handy reference-and Korodyban's clear and entertaining writing style mixes technical subject matter with humor and is both interesting and instructive. Tony Korodyban is a thermal analysis specialist at Tellabs Operations, Inc., a billion dollar developer and supplier of telecommunications equipment. He has also worked in electronic packaging design and thermal analysis at Sola Electric and at Bell Labs.

Still the number one resource for designers in the field, the Third Edition of this

classic Handbook is extensively revised and updated to reflect the enormous recent advances in electronic filter design... while maintaining the overall emphasis on practical

This IBM® Redbooks® publication will help you design and manage an end-to-end, extended distance connectivity architecture for IBM System z®. This solution addresses your requirements now, and positions you to make effective use of new technologies in the future. Many enterprises implement extended distance connectivity in a silo manner. However, effective extended distance solutions require the involvement of different teams within an organization. Typically there is a network group, a storage group, a systems group, and possibly other teams. The intent of this publication is to help you design and manage a solution that will provide for all of your System z extended distance needs in the most effective and flexible way possible. This book introduces an approach to help plan, optimize, and maintain all of the moving parts of the solution together.

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.
