With the explosion in the quantity of on-line text and multimedia information in recent years, there has been a renewed interest in automatic summarization. This book provides a systematic introduction to the field, explaining basic definitions, the strategies used by human summarizers, and automatic methods that leverage linguistic and statistical knowledge to produce extracts and abstracts. Drawing from a wealth of research in artificial intelligence, natural language processing, and information retrieval, the book also includes detailed assessments of evaluation methods and new topics such as multi-document and multimedia summarization. Previous automatic summarization books have been either collections of specialized papers, or else authored books with only a chapter or two devoted to the field as a whole. This is the first textbook on the subject, developed based on teaching materials used in two one-semester courses. To further help the student reader, the book includes detailed case studies, accompanied by end-of-chapter reviews and an extensive glossary. Audience: students and researchers, as well as information technology managers, librarians, and anyone else interested in the subject.

A guide to the different systems for determining text difficulty offers a review of recently developed applications such as Lexiles, as well as traditional readability formulas and systems for beginning readers and coverage of two electronic book matching programs, Accelerated Reader and Reading Counts.

Pattern recognition is an active area of research with many applications, some of which have reached commercial maturity. Structural and syntactic methods are very powerful. They are based on symbolic data structures together with matching, parsing, and reasoning procedures that are able to infer interpretations of complex input patterns. This book gives an overview of the latest developments and achievements in the field. Contents:Recent Advances in String Matching (H Bunke)A New Efficient Method to Represent and Process Proximity and Similarity in Sets of Complex Objects (H Noltemeier)A Quick Way for Relational Matching: Morphology (R M Haralick et

This book is a primer on, and key resource for, the art and science of caring. It presents 36 classic book chapters and journal articles, with bridge and contextual frames, and teaching tool for use from undergraduate to graduate and doctoral levels. This book includes nine thematic sections: how caring plays in nursing, the concept of caring, theoretical perspectives, seminal research studies, research designs and methods, practice models, caring for community health issues and in terms of policy, and leadership and administration.

This volume's goal is to provide readers with up-to-date information on the research and theory of scientific text comprehension. It is widely acknowledged that the comprehension of science and technological artifacts is very difficult for both children and adults. The material is conceptually complex, there is very little background knowledge for most individuals, and the materials are often poorly written. Therefore, it is no surprise that students are turned off from learning science and technology. Given these challenges, it is important to design scientific text in a fashion that fits the cognitive constraints of the learner. The enterprise of textbook design needs to be effectively integrated with research in discourse processing, educational technology, and cognitive science. This book takes a major step in promoting such an integration. This volume: *provides an important integration of research and theory with theoretical, methodological, and educational applications; *includes a number of chapters that cover how science text information affects mental representations and strategies; *introduces important suggestions about how text design and new technologies can be thought of as pedagogical features; and *establishes academic text taxonomies and a consensus of the criteria to organize inferences and other mental mechanisms.

This two-volume set (LNAI 9329 and LNAI 9330) constitutes the refereed proceedings of the 7th International Conference on Collective Intelligence, ICCCI 2014, held in Madrid, Spain, in September 2015. The 110 full papers presented were carefully reviewed and selected from 186 submissions. They are organized in topical sections such as multi-agent systems; social networks and NLP; sentiment analysis; computational intelligence and games; ontologies and information extraction; formal methods and simulation; neural networks, SMT and

MIS; collective intelligence in Web systems - Web systems analysis; computational swarm intelligence; cooperative strategies for decision making and optimization; advanced networking and security technologies; IT in biomedicine; collective computational intelligence in educational context; science intelligence and data analysis; computational intelligence in financial markets; ensemble learning; big data mining and searching.

Discourse and ideology are quintessential, albeit contested concepts in many functionally oriented branches of linguistics, such as linguistic anthropology, critical discourse studies, sociolinguistics, and sociology of language. With many ways of understanding and utilizing the concepts, the line between discourse and ideology can become blurry. This volume explores divergent ways in which the concept of ideology may be applied in different branches of sociolinguistics and the sociology of language, critical discourse studies, and applied linguistics. The goal is to provide an overview of the ways in which these two concepts can be used separately or together, emphasizing one or the other depending on the ways in which the concepts and their relationship are defined. The volume is targeted at scholars working in various fields of linguistics in which discourse and ideology are used as theoretical and analytical tools. While the target audience includes both senior and junior scholars, a particular goal is to reach junior scholars, who often struggle with the distinction between discourse and ideology and their theoretical and methodological potential. The volume is suitable for classroom use at the graduate level.
