This is a very old book but gives many ideas to teachers for constructing a whole course for building a computer from scratch; moreover the tutor may use this book for making lab exercises in different levels. A must have book for the teacher of computer architecture. The book contains limited theory due to the selected approach of the subject.

Starting a Retro PC using The 8088 Project Book. Several months ago, I purchased a copy of Robert Grossblatt's classic The 8088 Project Book in hopes of building a retro 8088 computer. My plan was to scavenge the parts from craigslist, ebay, and a couple Seattle area used computer junk stores. My adventures locally didn't result in many parts though I did have much fun finding all those old ISA cards.

this book is no stuffy manufacturers user manual. It gets right down to how to get working with the 8088 CPU, its support chips and working with its instruction set. Overall a good ol book if your an old school computer circuits geek.

## ~~The 8088 Project Book: Grossblatt, Robert: 9780830631711 ...~~

8088 Project Bookby Robert Grossblatt. This book is a good user-friendly introduction, although he tends to stay mired at a very introductory level throughout the entire book. Also, I found myself disappointed by his limited coverage of how to get actual practical

book got me started, but I also found another book: The 8088 Project Book by Robert Grossblatt (ISBN 0830631712). In my opinion, this second book is better because the author explains a lot more about what's going on whereas the first book was meant as a lab supplement for a college course, and so doesn't go in depth.

~~8088 Computer — HelmPCB~~

The reason I am asking is that the circuit (based on the 8284/8088 circuit in Grossblatt's 8088 Project Book) is behaving oddly. CLOCK and RESET out of the 8284 look correct but the address and control lines out of the 8088 don't seem to change from all zeros (not even tri-stated) after RESET goes back low.
