Article 2 of the European Convention on Human Rights (ECHR) in its current form is incomplete and outdated. Due to significant development at a legislative and judicial level, the right to life spans beyond what is enumerated within Article 2. With the belief that Article 2 is still relevant, this book investigates how the right to life can be better protected within Europe. It advocates for the modernisation of Article 2 through codifying legislative and judicial developments relevant to this provision in the form of guidelines. It also considers the improvements that can be made by the Council of Europe (CoE) bodies – the European Court of Human Rights (ECtHR), the Committee of Ministers (CoM), the Parliamentary Assembly of the Council of Europe (PACE) and the CoE Commissioner for Human Rights – to encourage adherence to Article 2 and promote effective remedies to prevent future violations. It uses the experience from four internal European conflicts – the Basque conflict, the Chechen conflict, the Northern Ireland Troubles and the Turkish-Kurdish conflict – to illustrate its points.

"A smart, sexy, delicious novel."--People "Santopolo is a true master of matters of the heart." --Taylor Jenkins Reid From the New York Times bestselling author of *The Light We Lost* comes a tender and moving new novel about a woman at a crossroads after the death of her father, and caught between the love of two men. Nina has always known who she's supposed to be. But is that who she truly is? Nina Gregory has always been a good daughter. Raised by her father, owner of New York City's glamorous Gregory Hotels, Nina was taught that family, reputation, and legacy are what matter most. And Tim--her devoted boyfriend and best friend since childhood--feels the same. But when Nina's father dies, he leaves behind a secret that shocks Nina to her core. Soon, Nina begins to see the men in her life--her father, her boyfriend, and unexpectedly, her boss, Rafael--in a new light, finding

A family history that explores the KGB, the fur trade, Freud and the assassination of Trotsky Leonid Eitingon was a KGB assassin who dedicated his life to the Soviet regime. He was in China in the early 1920s, in Turkey in the late 1920s, in Spain during the Civil War, and, crucially, in Mexico, helping to organize the assassination of Trotsky. “ As long as I live, ” Stalin said, “ not a hair of his head shall be touched. ” It did not work out like that. Max Eitingon was a

psychoanalyst, a colleague, friend and protégé of Freud's. He was rich, secretive and—through his friendship with a famous Russian singer—implicated in the abduction of a white Russian general in Paris in 1937. Motty Eitingon was a New York fur dealer whose connections with the Soviet Union made him the largest trader in the world. Imprisoned by the Bolsheviks, questioned by the FBI. Was Motty everybody's friend or everybody's enemy? Mary-Kay Wilmers, best known as the editor of the London Review of Books, began looking into aspects of her remarkable family twenty years ago. The result is a book of astonishing scope and thrilling originality that throws light into some of the darkest corners of the last century. At the center of the story stands the author herself—ironic, precise, searching, and stylish—wondering not only about where she is from, but about what she's entitled to know.

“ A hive of interesting facts and almost unbelievable stories about Adolf Hitler . . . Well worth a look. Well worth a read. ” —War History Online Based on intelligence documents, personal testimonies, memoirs, and official histories, including material only declassified in 2010, *Guarding Hitler* provides the reader with a fascinating inside look at the secret world of Hitler's security and domestic arrangements. The book focuses in particular on both the official and private life of Hitler during the latter part of the war, at the Wolf's Lair at Rastenburg, and Hitler's private residence at Berchtesgaden, the Berghof. *Guarding Hitler* manages to offer fresh insights into the life and routine of the Führer, and most importantly, the often indiscreet opinions, observations, and activities of the “ little people ” who surrounded Hitler but whose stories have been overshadowed by the great affairs of state. It covers not only the plots against Hitler's life but the way security developed as a result. His use of “ doubles ” is examined as is security while traveling by land or air. As little has been written about the security and domestic life of Adolf Hitler, *Guarding Hitler* allows the reader to delve deeper into this previously overlooked aspect of the world's most infamous man. “ A

fascinating view into the close world Hitler inhabited and which shaped his life and decisions. ” —Fire Reviews

This book examines a wide array of phenomena that arguably constitute the most noxious, extreme, terrifying, murderous, secretive, authoritarian, and/or anti-democratic aspects of national and international politics. Scholars should not ignore these "dark sides" of politics, however unpleasant they may be, since they influence the world in a multitude of harmful ways. The first volume in this two-volume collection focuses on the history of underground neo-fascist networks in the post-World War II era; neo-fascist paramilitary and terrorist groups operating in Europe and Latin America in the 1960s and 1970s; and the manipulation of those and other terrorist organizations by the security forces of various states, both authoritarian and democratic. A range of global case studies are included, all of which focus on the lesser known activities of certain secular extremist milieus. This collection should prove to be essential reading for students and researchers interested in understanding seemingly arcane but nonetheless important dimensions of recent historical and contemporary politics.

Hugo Chávez's extraordinary story—in his own words One of the most important Latin American leaders of the twenty-first century, Hugo Chávez was a military officer who became a left-wing revolutionary. This book tells the story of his life until the moment he was elected President in 1998. His energy and charisma shine throughout the riveting and historically important story of his early years, describing how he slowly uncovered the reality of his country—hugely unequal, with the majority of its citizens living in indescribably impoverished conditions—and decided that he had to do something about it. Among other things, it is a fascinating account of his long-planned military conspiracy—the most significant in the history of Venezuela and perhaps of Latin America—that led up to his unsuccessful coup of 1992, and eventually to his popular electoral

victory in 1998. His collaborator on this book is Ignacio Ramonet, the famous left-wing French journalist (and Editor for many years of *Le Monde Diplomatique*), who undertook a similar task with Fidel Castro, *My Life*.

The contribution of genomic variants to the aetiopathogenesis of both paediatric and adult neurological disease is being increasingly recognized. The use of next-generation sequencing has led to the discovery of novel neurodevelopmental disorders, as exemplified by the deciphering developmental disorders (DDD) study, and provided insight into the aetiopathogenesis of common adult neurological diseases. Despite these advances, many challenges remain. Correctly classifying the pathogenicity of genomic variants from amongst the large number of variants identified by next-generation sequencing is recognized as perhaps the major challenge facing the field. Deep phenotyping (e.g., imaging, movement analysis) techniques can aid variant interpretation by correctly classifying individuals as affected or unaffected for segregation studies. The lack of information on the clinical phenotype of novel genetic subtypes of neurological disease creates limitations for genetic counselling. Both deep phenotyping and qualitative studies can capture the clinical and patient 's perspective on a disease and provide valuable information. This Special Issue aims to highlight how next-generation sequencing techniques have revolutionised our understanding of the aetiology of brain disease and describe the contribution of deep phenotyping studies to a variant interpretation and understanding of natural history.
