The following study of narcissism in the leading character in a recent film, High Fidelity, nonetheless attempts without apology such a psychological analysis of a popular work of fiction. It is the argument of this study that, although High Fidelity is not necessarily high art or even a profoundly serious film, it does present, like much of the best popular art, an insightful and honest examination of a real modern dilemma: the difficulty of intimate relationships in a world where every emotion and every remark seems to have a pop culture reference or origin. This film presents, we will show, a complex and detailed portrait of a particular modern personality type, the narcissistic youth who turns into an overage Peter Pan incapable of commitment; more significantly, however, the film (and the book from which it was adapted) suggests a way out of this dilemma for the protagonist, who ultimately succeeds in overcoming his self-absorption.

The human haptic system, among all senses, provides unique and bidirectional communication between humans and their physical environment. Yet, to date, most human-computer interactive systems have focused primarily on the graphical rendering of visual information and, to a lesser extent, on the display of auditory information. Extending the frontier of visual computing, haptic interfaces, or force feedback devices, have the potential to increase the quality of human-computer interaction by accommodating the sense of touch. They provide an attractive augmentation to visual display and enhance the level of understanding of complex data sets. They have been effectively used for a number of applications including molecular docking, manipulation of nano-materials, surgical training, virtual prototyping, and digital sculpting. Compared with visual and auditory display, haptic rendering has extremely demanding computational requirements. In order to maintain a stable system while displaying smooth and realistic forces and torques, high haptic update rates in the range of 5001000 Hz or more are typically used. Haptics present many new challenges to researchers and developers in computer graphics and interactive techniques. Some of the critical issues include the development of novel data structures to encode shape and material properties, as well as new techniques for geometry processing, data analysis, physical modeling, and haptic visualization. This synthesis examines some of the latest developments on haptic rendering, while looking forward to exciting future research in this area. It presents novel haptic rendering algorithms that take advantage of the human haptic sensory modality. Specifically it discusses different rendering techniques for various geometric representations (e.g. point-based, polygonal, multiresolution, distance fields, etc), as well as textured surfaces.

Vintage music buffs have long been bedazzled by the bizarre, cartoonish album covers tagged with the signature 'Flora'. In the 1940s and '50s, Jim Flora designed dozens of cover illustrations, featuring angular hepcats playing cock-eyed pianos and lollipop-shaped horns. While expressing a child-like exuberance, these images had a sinister tinge of the grotesque about them. This is the first collection of these marvellous, mischievous album illustrations to be published, and it includes a biographical profile, interviews, photographs and tributes from old friends.

Now a Hulu TV series starring Zoë Kravitz From the bestselling author of Funny Girl, About a Boy, and A Long Way Down, a wise and hilarious novel about love, heartbreak, and rock and roll. Rob is a pop music junkie who runs his own semi-failing record store. His girlfriend, Laura, has just left him for the guy upstairs, and Rob is both miserable and relieved. After all, could he have spent his life with someone who has a bad record collection? Rob seeks refuge in the company of the offbeat clerks at his store, who endlessly review their top five films; top five Elvis Costello songs; top five episodes of Cheers. Rob tries dating a singer, but maybe it's just that he's always wanted to sleep with someone who has a record contract. Then he sees Laura again. And Rob begins to think that life with kids, marriage, barbecues, and soft rock CDs might not be so bad.

A rich account that combines media-industry history and cultural studies, Their Own Best Creations looks at women writers' contributions to some of the most popular genres of postwar TV: comedy-variety, family sitcom, daytime soap, and suspense anthology. During the 1950s, when the commercial medium of television was still being defined, women writers navigated pressures at work, constructed public personas that reconciled traditional and progressive femininity, and asserted that a woman's point of view was essential to television as an art form. The shows they authored allegorize these professional and personal pressures and articulate a nascent second-wave feminist consciousness. Annie Berke brings to light the long-forgotten and under-studied stories of these women writers and crucially places them in the historical and contemporary record.
