The ship model of HMS Victory in the scale of 1:100 from the kit of the company Lee (Heller) was assembled in 1997. Assembling took me 9 months. The task was to assemble a model for a show-case with minimal modifications. That's why bad threads are present in the rigging, lack of attention to small, but "reviving" details.

The plans are mainly from John McKay's "The 100 Gun Ship Victory", and Arthur Bugler's "H.M.S. Victory': building, restoration & repair", but many other source are used, too. This shop features scale parts for HMS Victory mainly but some parts will fit to other period ships of the line, too.

This is a beautiful and informative guidebook and history of HMS Victory. On 7 May 1765 a magnificent new ship of the line was floated out of the Old Single Dock in Chatham's Royal Dockyard. She was HMS Victory, a first-rate battleship and the largest and most up-to-date ship in King George III's Royal Navy. In the years to come, over an unusually long service, she would gain renown leading fleets in the American War of Independence, the French Revolutionary War and the Napoleonic War. She achieved lasting fame as the flagship of Vice-Admiral Lord Nelson in Britain's greatest naval victory, the defeat of the French and Spanish at the Battle of Trafalgar. It is almost impossible today to imagine the physical brutality of fighting at sea in sailing warships. These great wooden battleships, under acres of sail, confronted each other at point blank range, their crews intent on smashing and capturing the other ship. Their heavy guns blasted tons of iron, shattering hulls, splintering masts and yards, overturning gun

carriages and filling the air with deafening noise and blinding smoke. She may seem beautiful to our eyes, but Victory was built principally as a huge and complex machine of war. Every man in her 820 crew played a vital part in operating the ship and ensuring that ultimately she was in the right place and ready to fire her deadly broadside of iron shot.

Forever associated with Nelson's last battle, HMS Victory is one of the most famous ships of all time, and is now preserved at a museum in Portsmouth. This book presents a full description of the ship and her position in the development of the First Rate.

"A beautiful book . . . a goldmine of information to anyone interested in the capital ships of the sailing navy of the 17th and 19th Centuries."—Ships in Scale The National Maritime Museum in Greenwich houses the largest collection of scale ship models in the world, many of which are official, contemporary artifacts made by the craftsmen of the navy or the shipbuilders themselves, and ranging from the mid-seventeenth century to the present day. As such they represent a three-dimensional archive of unique importance and authority. Treated as historical evidence, they offer more detail than even the best plans, and demonstrate exactly what the ships looked like in a way that even the finest marine painter could not achieve. The Ship of the Line is the second of a new series that takes selections of the best models to tell the story of specific ship types—in this case, the evolution of the ship of the line, the capital ship of its day, and the epitome of British seapower during its heyday from 1650-1850. This period also coincided with the golden age of ship modelling. Each volume depicts a wide range of models, all shown in full color, including many close-up and detail views. These are captioned in depth, but many are also annotated to focus attention on interesting or unusual features, and the book weaves the pictures into an authoritative text, producing a unique form of technical history. The series is of particular interest to ship modellers, but all those with an enthusiasm for the ship design and development in the sailing era will be attracted to the in-depth analysis of these beautifully presented books.

This text covers the career and reconstruction of HMS Victory. There are over 200 drawings of how she was in 1805, making this a detailed technical manual on the construction and fitting, and the alterations and restoration of an 18th century man-of-war.

From about the middle of the seventeenth century the Navys administrators began to commission models of their ships that were accurately detailed and, for the first time, systematically to scale. These developed a recognised style, which included features like the unplanked lower hull with a simplified

pattern of framing that emphasised the shape of the underwater body. Exquisitely crafted, these were always rare and highly prized objects indeed, Samuel Pepys expressed a profound desire to own one and today they are widely regarded as the acme of the ship modellers art. Today examples form the highlights of collections across the world, valued both as art objects and as potential historical evidence on matters of ship design. However, it was only recently that researchers began to investigate the circumstances of their construction, their function, and the identities of those who made them. This book, by two curators who have worked on the worlds largest collection of these models at the National Maritime Museum in Greenwich, summarises the current state of knowledge, outlines important discoveries, and applies this new-found understanding to many of the finest models in the collection. As befits its subject, Navy Board Ship Models is visually striking, with numerous colour photographs that make it as attractive as it is informative to anyone with an interest in modelmaking or historic ships.

The history of Admiral Horatio Nelson has been written from every possible angle, but this was not so with his ships. Not until this work was first published in 1955. Before then, such information as there was about the ships was buried in archives on Naval Architecture; only the top expert could have sifted it and present it in a usable form. Dr. Longridge was that expert, and his work became a veritable treasure trove for every naval historian and ship modeller. His research is supported by 271 detailed line drawings, rare photographs and fold-out plans showing hull framing, interior construction, complexing and deck layouts.
