In the late Roman Empire, forts were constructed along the eastern and southern coasts of Britain as part of the defenses against Saxon raiders. Andrew Pearson looks at the eleven surviving forts, and explains how they were constructed and what their precise role was.

Carausius.

Additional coverage of study areas ensures that this series can be used to teach the complete specifications for history at KS3. It is intended to raise student's interest in history and encourage the use of their critical historical skills. The accompanying teacher resource material is designed to ease the pressure of lesson planning.

Impressive in every sense, this hugely ambitious and assured book takes as its subject the entire history of the British Isles from the end of the last Ice Age and their physical emergence as islands all the way down to the Norman Conquest. Barry Cunliffe's magisterial narrative is abetted by correspondingly high production values, and whilst complex ideas are explained with admirable clarity, making the book an ideal introduction to Britain's prehistory and early history, there would be plenty here for the most seasoned professional to enjoy and profit from. Cunliffe kicks off with an examination of the ways in which our ancestors have conceived the distant past, from medieval myths to the dawn of modern archaeology. The remainder of the book is roughly chronological in structure. Prominent themes include the 'problem of origins', where Cunliffe's own research has been of such significance (the Celtic from the west hypothesis is synthesised here with concision and flair), and the importance of communication, connectivity and cultural transmission is emphasised throughout, with the Channel, the Atlantic and the North Sea seen as highways linking Britain and Ireland to the continent and building up an ongoing narrative which is anything but narrowly insular.

The second volume of the articles originally published in the Barnoldswick and Earby Times. Readable and informative history and opinion. Fully illustrated with over 180 photographs.

For humans the sea is, and always has been, an alien environment. Ever moving and ever changing in mood, it is a place without time, in contrast to the land which is fixed and scarred by human activity giving it a visible history. While the land is familiar, even reassuring, the sea is unknown and threatening. By taking to the sea humans put themselves at its mercy. It has often been perceived to be an alien power teasing and cajoling. The sea may give but it takes. Why, then, did humans become seafarers? Part of the answer is that we are conditioned by our genetics to be acquisitive animals: we like to acquire rare materials and we are eager for esoteric knowledge, and society rewards us well for both. Looking out to sea most will be curious as to what is out there - a mysterious island perhaps but what lies beyond? Our innate inquisitiveness drives us to explore. Barry Cunliffe looks at the development of seafaring on the Mediterranean and the Atlantic, two contrasting seas - the Mediterranean without a significant tide, enclosed and soon to become familiar, the Atlantic with its frightening tidal ranges, an ocean without end. We begin with the Middle Palaeolithic hunter-gatherers in the eastern Mediterranean building simple vessels to make their remarkable crossing to Crete and we end in the early years of the sixteenth century with sailors from Spain, Portugal and England establishing the limits of the ocean from Labrador to Patagonia. The message is that the contest between humans and the sea has been a driving force, perhaps the driving force, in human history.

A number of nations, conspicuously Israel and the United States, have been increasingly attracted to the use of strategic barriers to promote national defense. In Do Good Fences Make Good Neighbors?, defense analyst Brent Sterling examines the historical use of strategic defenses such as walls or fortifications to evaluate their effectiveness and consider their implications for modern security. Sterling studies six famous defenses spanning 2,500 years, representing both democratic and authoritarian regimes: the Long Walls of Athens, Hadrian's Wall in Roman Britain, the Ming Great Wall of China, Louis XIV's Pré Carré, France's Maginot Line, and Israel's Bar Lev Line. Although many of these barriers were effective in the short term, they also affected the states that created them in terms of cost, strategic outlook, military readiness, and relations with neighbors. Sterling assesses how modern barriers against ground and air threats could influence threat perceptions, alter the military balance, and influence the builder's subsequent policy choices. Advocates and critics of strategic defenses often bolster their arguments by selectively distorting history. Sterling emphasizes the need for an impartial examination of what past experience can teach us. His study yields nuanced lessons about strategic barriers and international security and yields findings that are relevant for security scholars and compelling to general readers.

The Peddars Way and Norfolk Coast Path National Trail is an easy-to-follow 130-mile trail that combines the best of inland and coastal walking in Norfolk, and one that, being well waymarked, largely flat and within easy reach of public transport for most of its length, is ideal for people new to long-distance walks. Described in 11 stages, the route can be walked in just over a week but also easily split into day walks or over a series of weekends, with full information about access to start and finish points for each stage by public transport. This handy guidebook is illustrated throughout with extracts of OS 1:50K mapping and stunning photographs depicting the Trail in all seasons and describes points of interest along the way, including the Norfolk Songlines sculptures, and also facilities available in the towns and villages. The trail is a walk of two halves. The Peddars Way begins at Knettishall Heath in Suffolk and follows the route of an old Roman road for over 40 miles to Holme-next-the-Sea, where it meets the Norfolk Coast Path (which begins nearby, at Hunstanton). This then follows the spectacular Norfolk coast to the seaside town of Hopton-on-Sea.
