Alternatively, it is enough to require that f is continuous.; A subgroup of the topological group is a topological group.. Moreover, the closure is also a subgroup, and, hence, a topological group.; A topological group satisfies the regularity axiom: a closed subset and a point can be separated by two disjoint open neighborhoods.. Hence, X is also a Hausdorff space.

A solutions manual for Topology by James Munkres | 9beach

The study of topology and its spaces is an important aspect of mathematics, topological spaces like other mathematical spaces have axioms that must be satisfied for a topological space to hold. Today i will be treating those axioms with solution to exercises from the book "Topology without tears" by Sydney A. Morris.

Some solutions have figures, which are done directly in LaTeX using the TikZ and PGFPLOTS packages. The python directory contains some quick and dirty Python scripts that were used to gain insight while working on some of the exercises. These are not documented at all and so probably will not be of interest to anyone else.

Munkres - Topology - Chapter 4

Solutions Section 30 Problem 30.1.

Solution: Part (a) Suppose X is a first-countable T_1 space. Let $\{x_n\}$ be a one-point set in X , which must be closed.

Let $B = \{B_n\}$ be a collection of neighborhoods of x such that every neighborhood of x contains at least one B_n . Clearly x is contained in every B_n . If $\{x_n\}$ is open, then some B
