Unit 20 - Client side customization of web pages
In this blog I will be looking at client side scripting (mostly JavaScript) and the effect that a different browser has on the way code is interpreted. Continue reading This entry was posted in Unit 20 on September 16, 2015 by ryanb162 .

Unit 20 | Ryan Bibby
Client side scripts rely on the users computer. If that computer is slow then it may run slowly. They may not run at all if the browser does not understand the scripting language, this is one reason why it is important to have recent browsers because they have to run on the users system and the code, which makes up the script is there is the HTML for the user to look at.
