structures, and moves
on to practice

everyday functions

such as making

introductions,

apologizing and

expressing needs.

With an extensive

answer key at the

back to enable

students to check on

their progress, main

features include:

era of fossil fuels?

While most answers focus on different

primary energy

resources, Energy

Energy Vectors

provides a completely new approach.

Instead of providing a traditional

consumption analysis of classical primary

energy resources

such as oil, coal, nuclear power and gas, Energy Systems in the Era of Energy Vectors describes and assesses energy technologies, markets and future strategies, focusing on their capacity to produce, exchange, and use energy vectors. Special attention is given to the

An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces.

Differential forms are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem, can be presented in its

natural setting. The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in R^3 as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present
