Bray, not Rudy Rucker) is a short clearly guided tour on the analogies between biology and computing. Bray walks the reader through the protein-driven algorithms that generate complex behavior even in single-celled organisms without nervous systems, biological sensory mechanisms, cellular communications, and the basics of neurons.

In *Wetware*, Bray offers imaginative, wide-ranging and perceptive critiques of robotics and complexity theory, as well as many entertaining and telling anecdotes. For the general reader, the practicing scientist, and all others with an interest in the nature of life, the book is an exciting portal to some of biology's latest discoveries and ideas.

## **Wetware: A Computer in Every Living Cell « Kurzweil**

A wetware computer is an organic computer composed of organic material such as living neurons.

## Read PDF Wetware A Computer In Every Living Cell Dennis Bray

Wetware computers composed of neurons are different than conventional computers because they are thought to be capable in a way of "thinking for themselves", because of the dynamic nature of neurons. While wetware is still largely conceptual, there has been limited success with construction and prototyping, which has acted as a proof of the concept's realistic application to computing in the future. Th
