Anything with a pH below 7 is acidic. Anything with a pH above 7 is basic. One of the earliest tests to determine acids from bases was the litmus test. A chemical patch turned red for acids, blue for bases. Today chemists can also use pH indicator paper, which turns every color of the rainbow to indicate how strong or weak an acid or base is.

Bases can be thought of as the chemical opposite of acids. A reaction between an acid and base is called a neutralization reaction. The strength of an acid refers to its ability or tendency to lose a proton; a strong acid is one that completely dissociates in water.

Any acid or base is technically a conjugate acid or conjugate base also; these terms are simply used to identify species in solution (i.e acetic acid is the conjugate acid of the acetate anion, a base, while acetate is the conjugate base of acetic acid, an acid).

~~Overview of Acids and Bases - Chemistry LibreTexts~~

Arrhenius Acids and Bases Way back in the late 1800s, our old friend Svante Arrhenius came up with definitions of acids and bases while working on kinetics problems. According to Arrhenius, acids are compounds that break up in water to give off hydronium (H⁺) ions. A common example of an Arrhenius acid is hydrochloric acid (HCl):

~~Chemistry: What Are Acids and Bases? - InfoPlease~~

Acids and bases can be defined by their physical and chemical observations (Table 15.1.1). Acids and bases in aqueous solutions will conduct electricity because they contain dissolved ions. Therefore, acids and bases are electrolytes. Strong acids and bases will be strong electrolytes.

~~15.1: Classifications of Acids and Bases - Chemistry ...~~

Arrhenius acids include compounds such as HCl, HCN, and H₂SO₄ that ionize in water to give the H⁺ ion. Arrhenius bases include ionic compounds that contain the OH⁻ ion, such as NaOH, KOH, and Ca(OH)₂.

~~Definitions of Acids and Bases, and the Role of Water~~

Acids and bases are two special kinds of chemicals. Almost all liquids are either acids or bases to some degree. Whether a liquid is an acid or base depends on the type of ions in it. If it has a lot of hydrogen ions, then it is an acid.

The acid or base molecule does not exist in aqueous solution, only ions. Weak electrolytes are incompletely dissociated. Here are definitions and examples of strong and weak acids and strong and weak bases. Strong Acids . Strong acids completely dissociate in water, forming H^+ and an anion. There are six strong acids.

~~Determining the Strength of Acids and Bases~~

Talk about common acids and bases. Explain that acids and bases are found all over the place. For instance, bodies use acids to help digest food, and many cleaning products contain bases. Ask the kids to name some common substances and guess if they are acidic or basic.
