STEM for Kids - Fun for Kids (Ages 8-10) #1 New Release in Children's Books: Environment & Ecology, Atlases, Anatomy, and Earthquake & Volcano In their debut illustrated science book for kids, the team behind the popular YouTube channel MinuteEarth answers all of your child ' s wackiest questions about animals, nature, and science alongside engaging images of the natural world. From the scientists, writers, and illustrators at MinuteEarth. Have you ever wondered where Earth ' s water came from? Or why leaves change color in the fall? Entertain and educate your kids with fun facts about animals, nature and the wonders of the earth. Amazing STEM for kids, explained simply. With over 300

minute views, MinuteEarth simplifies such serious subjects as geology, ecology and biology making them fun for kids. Featuring their signature puns and fun illustrations, this first book in the MinuteEarth Explains series explores topics ranging from weird animal facts to extreme weather, making science for kids enjoyable and unforgettable. Curious questions about our awesome planet. Whether your child is obsessed with the wonder of nature, can ' t learn enough interesting facts about animals, or is fascinated by volcanoes, MinuteEarth Explains captures their imagination and fosters an interest in animals, the Earth, and ocean life! By combining humor with rigorous research, this book provides fun facts about animals, nature, science and more in an equally engaging and informative way for kids. MinuteEarth Explains captivates kids with answers to: • Why do some animals get gigantic? • Why do rivers curve? • Can plants talk? • How much food is there on earth? • And more! If you ' re looking for nature books for kids (8-10) or earth science books for kids or if your child loves books such as The Big Book of Birds, Why?: 1,111 Answers to Everything, or The Wondrous Workings of Planet Earth then your whole family will love this debut book by MinuteEarth!

Prentice Hall Physical Science: Concepts in Action helps students make the important connection between the science they read and what they experience every day. Relevant content, lively explorations, and a wealth of hands-on activities take students' understanding of science beyond the page and into the world around them. Now includes even more technology, tools and activities to support differentiated instruction!

This textbook introduces the use of Python programming for exploring and modelling data in the field of Earth Sciences. It drives the reader from his very first steps with Python, like setting up the environment and starting writing the first lines of codes, to proficient use in visualizing, analyzing, and modelling data in the field of Earth Science. Each chapter contains explicative examples of code, and each script is commented in detail. The book is minded for very beginners in Python programming, and it can be used in teaching courses at master or PhD levels. Also, Early careers and experienced researchers who would like to start learning Python programming for the solution of geological problems will benefit the reading of the book.

The instant New York Times bestselling book of entertaining, irreverent, and totally accessible illustrated answers to the scientific " questions you had no idea were bugging you all your life " (Fat Company), from the creators of the wildly popular YouTube channel AsapSCIENCE. Why do we get hung over? What would happen if you stopped sleeping? Is binge-watching TV actually bad for you? Why should I take a power nap? In their first-ever book, Mitchell Moffitt and Greg Brown, the geniuses behind the YouTube channel AsapSCIENCE, explain the true science of how things work in their trademark hilarious and fascinating fashion. Applying the fun, illustrated format of their addictive videos to topics ranging from brain freeze to hicups to the science of the snooze button, AsapSCIENCE takes the underpinnings of biology, chemistry, physics, and other hard sciences and applies them to everyday life through quirky and reliable examples that will appeal to both science nerds and those who didn' t exactly ace chemistry. This is the science that people actually want to learn, shared in a friendly, engaging style. " Science is big fun. The ASAP guys get that, and they ' ll show you—they ' ll even draw you a diagram " (Bill Nye, " The Science Guy "). And amid the humor is great information and cocktail conversation fodder, all thoughtfully presented. Whether you ' re a total newbie or the next Albert Einstein, this guide is sure to educate and entertain...ASAP.

Exploring Earth Science by Reynolds/Johnson is an innovative textbook intended for an introductory college geology course, such as Earth Science. This ground-breaking, visually spectacular book was designed from cognitive and educational research on how students think, learn, and study. Nearly all information in the book is built around 2,600 photographs and stunning illustrations, rather than being in long blocks of text that are not articulated with figures. These annotated illustrations help students visualize geologic processes and concepts, and are suited to the way most instructors already teach. To alleviate cognitive load and help students focus on one important geologic process or concept at a time, the book consists entirely of two-page spreads organized into 20 chapters. Each two-page spread is a self-contained block of information about a specific topic, emphasizing geologic concepts, processes, features, and approaches. These spreads help students learn and organize geologic knowledge in a new and exciting way. Inquiry is embedded throughout the book, modelling how scientists investigate problems. The title of each two-page spread and topic heading is a question intended to get readers to think about the topic and become interested and motivated to explore the two-page spread for answers. Each chapter is a learning cycle, which begins with a visually engaging two-page spread about a compelling geologic issue. Each chapter ends with an Investigation that challenges students with a problem associated with a virtual place. The world-class media, spectacular presentations, and assessments are all tightly articulated with the textbook. This book is designed to encourage students to observe, interpret, think critically, and engage in authentic inquiry, and is highly acclaimed by reviewers, instructors, and students.

Discusses herbivores, carnivores and omnivores and the food chains in nature which help to keep the balance between the different kinds of creatures.

NEW YORK TIMES BESTSELLER Jason M. Hough ' s pulse-pounding debut combines the drama, swagger, and vivid characters of Joss Whedon ' s Firefly with the talent of sci-fi author John Scalzi. In the mid-23rd century, Darwin, Australia, stands as the last human city on Earth. The world has succumbed to an alien plague, with most of the population transformed into mindless, savage creatures. The planet ' s refugees flock to Darwin, where a space elevator—created by the architects of this apocalypse, the Builders—emits a plague-suppressing aura. Skyler Luiken has a rare immunity to the plague. Backed by an international crew of fellow " immunes, " he leads missions into the dangerous wasteland beyond the aura ' s edge to find the resources Darwin needs to stave off collapse. But when the Elevator starts to malfunction, Skyler is tapped—along with the brilliant scientist, Dr. Tania Sharma—to solve the mystery of the failing alien technology and save the ragged remnants of humanity. Praise for The Darwin Elevator " A hell of a fun book. " —James S. A. Corey, New York Times bestselling author of Abaddon ' s Gate " [Jason M.] Hough ' s first novel combines the rapid-fire action and memorable characters associated with Joss Whedon ' s short-lived Firefly TV series with the accessibility and scientific acumen of [James S. A.] Corey ' s " Expanse " series. " —Library Journal (starred review) " The best part about alien stories is their mystery, and Jason Hough understands that like no other. Full of compelling characters and thick with tension, The Darwin Elevator delivers both despair and hope along with a gigantic dose of wonder. It ' s a brilliant debut, and Hough can take my money whenever he writes anything from now on. " —Kevin Hearne, New York Times bestselling author of The Iron Druid Chronicles " Newcomer Hough displays a talent for imaginative plotting and realistic dialogue, and the brisk pacing and cliffhanger ending will keep readers enthralled and eagerly awaiting the next installment. " —Publishers Weekly " Jason M. Hough does a great job with this huge story. The world of Darwin and the Elevator is deliciously complex and satisfying. Skyler, Tania, and all the other characters are delightfully drawn and fun to spend time with. . . . The story unfolds with just the right balance of high adventure, espionage, humor, and emotional truth. . . . As soon as you finish, you ' ll want more. " —Analog " A debut novel unlike any other. . . . This is something special. Something iconic. The Darwin Elevator is full of majesty and wonder, mystery and maybe, colorful characters and insidious schemes. " —SF Signal " Fun, action-packed and entertaining . . . a sure contender for science fiction debut of the year! " —Pat ' s Fantasy Hotlist " Claustrophobic, intense, and satisfying. . . I couldn' t put this book down. The Darwin Elevator depicts a terrifying world, suspends it from a delicate thread, and forces you to read with held breath as you anticipate the inevitable fall. " —Hugh Howey, New York Times bestselling author of Wool

Did you know that the Earth is home to so many kinds of landforms? This exciting book will take you to the deepest valleys and the highest mountains in just a few minutes. Here, you will learn about the differences between hill and mountains, and possibly figure out what landform you love best. Grab a copy today!

It's late September 2019 when a young astronomer working at the Haleakala Space Observatory, in Maui Hawaii, accidentally spots a black dot in the night sky that is occulting the stars that lie behind it. The Earth-sized black sphere is in our solar system and is calculated to be closely trailing Earth by only seventy-five million miles. And, is on the same ecliptic plane.Black Earth - How We Got Here is a story that has never been told before. It's a story that will connect the dots of the universe and answer the age old questions of Are we alone in the universe? How humans came to be on Earth? What are the origins of religion, racism and segregation?What happens next will bridge the gap between Earth and Zenith, life and death, time and space, and will result in the heartbreaking story of love, family, and mankind's past, present and future.
