All cells in the test tube population were not counted on the glass slides. Only a small sample was counted. Thus, this method of determining population is called a sampling technique. Multiplying all average yeast cell counts in Table 1 by 1000 will give an estimate of

~~Population and ...~~

A yeast population is affected by a number of factors, the control of which is essential for optimal activity.

These factors include pH, temperature, nutrient availability, and the concentration of available nutrients. By determining which factors affect the yeast activity, these

File Type PDF

Yeast

variables can be controlled in the fermentation process.

Answer Key

~~TEACHER ACTIVITY GUIDE~~

Listed below are some important tips for working with yeast.

Setting up a population of yeast: 1. Use a graduated pipette to transfer 1 ml of the yeast from

File Type PDF

Yeast

the class culture to a standard test tube. Measure carefully. In this case, more is not better. 2. Add two drops of iodine to yeast in the test tube. Be sure to drop the iodine into the culture, not
